

# Reduce Your Mobile App Testing Costs by up to 68%\*

Build Your Own Mobile Device Farm, With Devices You Already Own

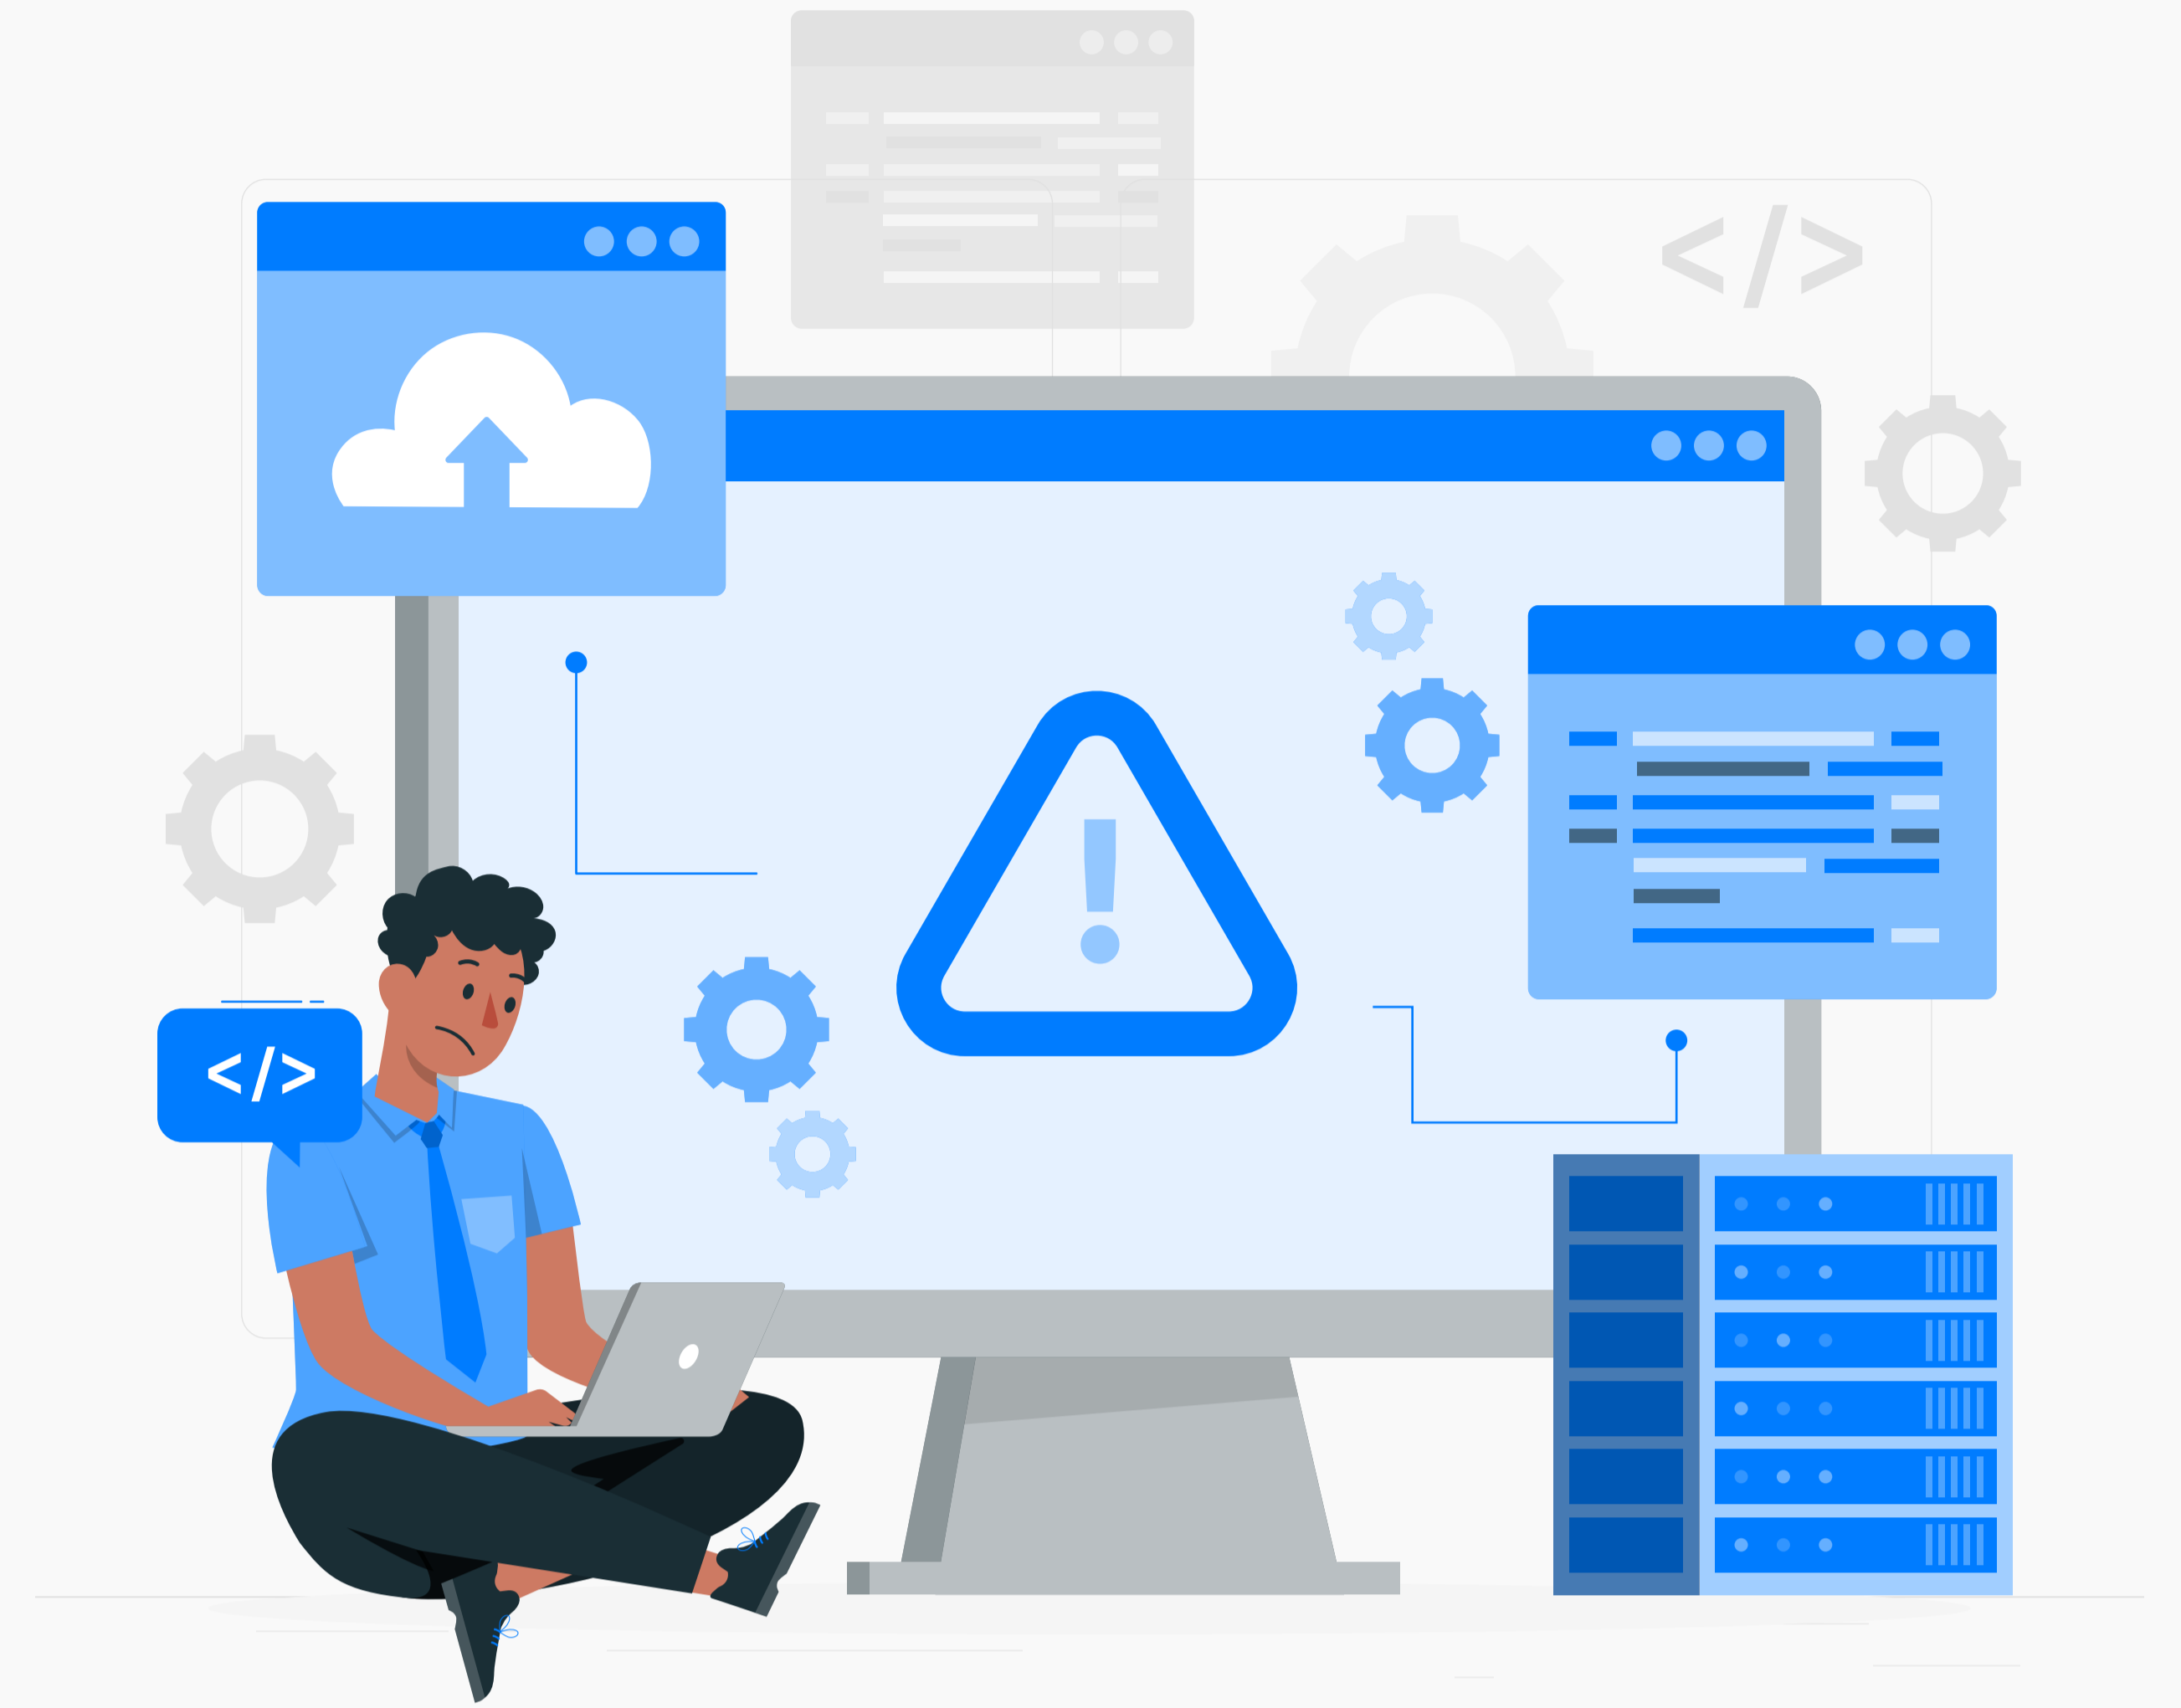

Zero Device Rental Costs | Run Automated Tests | Perform Manual Testing

# The Challenge

DevOps and QA teams struggle with mobile application testing when:

- Teams are geographically distributed
- Device procurement is expensive
- Device rental costs are exorbitant
- Physical transportation of devices is logistically complex
- Maintaining a diverse device ecosystem is challenging
- Ensuring consistent testing across different device models and OS versions is difficult

# The Solution

With AstroFarm, you build your own private cloud-based mobile device farm that allows you to:

- Enable remote device testing
- Utilize existing devices
- Reduce device procurement and rental expenses
- Eliminate the need for physical transportation of devices
- Support automated and manual testing
- Scale testing infrastructure dynamically

# Why Choose AstroFarm?

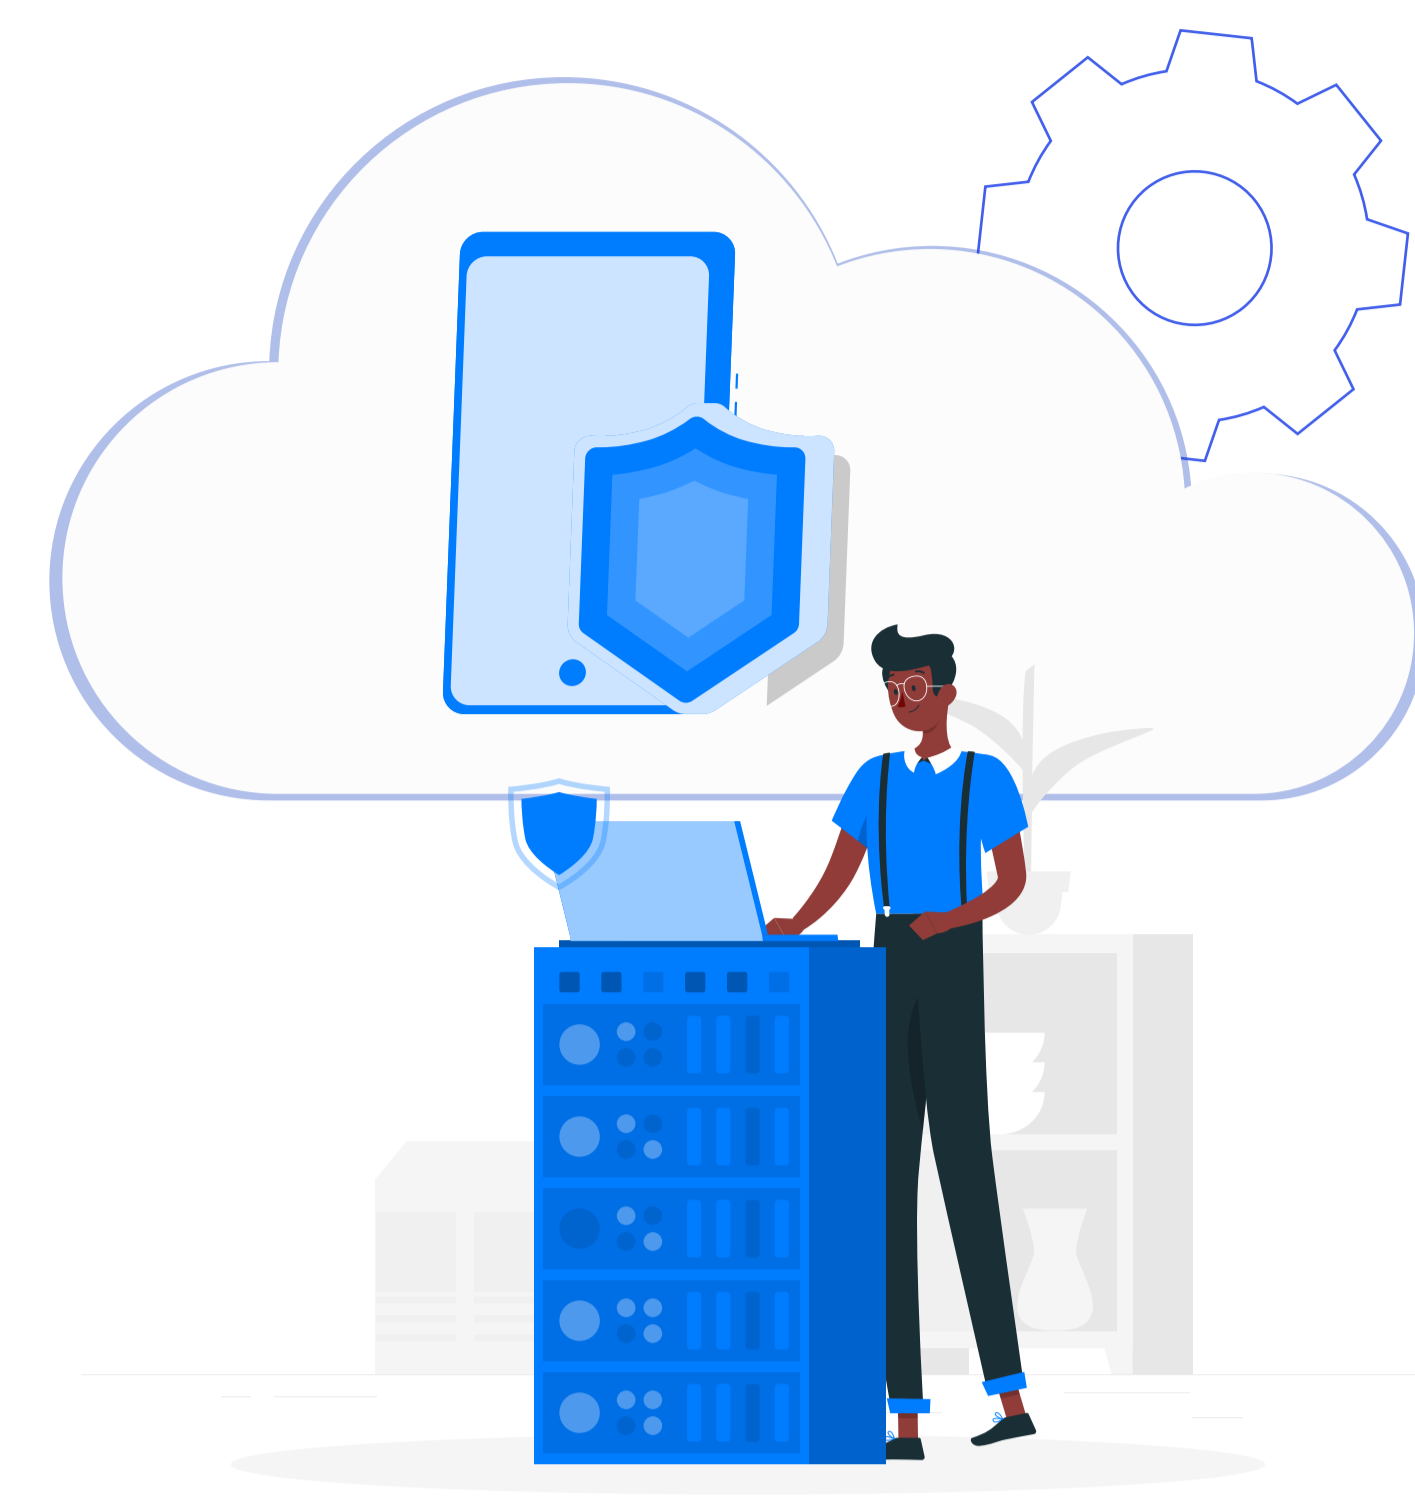

## Maximize Device ROI

- Utilize devices you already own
- Create a 24/7 personalized testing environment
- Eliminate redundant device purchases across locations

## Remote-First Design

- Perfect for hybrid and fully remote enterprises
- Provide full device access to employees anywhere
- No physical location constraints

## Total Device Security

- Complete control over device access
- Eliminate risks of public device clouds
- Secure, isolated testing environment

# Key Features

## Quick Device Enrollment

- Connect multiple devices in minutes
- Add devices with Windows, Linux, and macOS
- Support for Android, iOS, and iPadOS
- Seamless integration with existing infrastructure

## Advanced Testing Capabilities

- Automation testing with Appium and Selenium
- Remote debugging for Android and iOS
- Performance monitoring in real-time
- Automatic crash log capture
- Screen recording of crash events

## Simplified Test Environment Control

- Multi-device screen viewing
- Device grouping and access control
- Schedule device groups for set time periods
- Bulk app management (Install/Uninstall)
- Block faulty devices automatically

# Technical Specifications

## Supported Platforms:

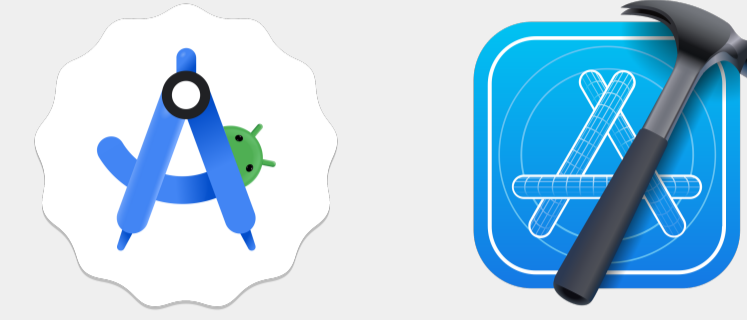

## CI/CD Integrations:

GitHub | Jenkins | GitLab

## Automation Testing Tools:

## Development and Debugging Tools:

# Pricing & Scalability

## Flexible Growth

- Pay-per-device and Pay-per-user add-on model
- Scale up or down as needed

## Global Compliance

# Customer Success

AstroFarm helped us obtain 200% ROI on equipment and transportation costs in just a few months!

-TransAct Technologies

\* By utilizing company-owned devices, businesses can reduce their investment costs by up to 68%. A customer benefitted with 200% ROI just on direct equipment & transportation costs in their first few months of using AstroFarm.
